

DR!PSTOP

Condensation control

Why use DR!PSTOP:

- **Fights Condensation without insulation**, avoid the challenges that come with traditional moisture barriers.
- **Save Time and Money**, by cutting one step from the building process you will save on labor cost and the time to install insulation.
- **It is Durable**, very difficult to cut or slice through, which make it perfect for self-storage, equipment storage, carport, and garage applications.
- **Easy to maintain**, there are no problems with birds nesting.
- **Looks great and it's easy to clean**, a hose or pressure washer can easily be used to clean if needed.
- **Fights corrosion**, tests show that it adds another layer of protection specifically from the corrosive elements in livestock confinement.
- **Reduces external and internal noise**, studies show rain and echo sounds reduced on average by at least 20%.

How it Works:

When climate conditions cause condensation to occur, DR!PSTOP absorbs and holds that moisture in the specifically designed pockets in the membrane. When climate conditions go above the dew point, the moisture is released back into the air as normal humidity.

DR!PSTOP can hold more than one quart of water per ten square feet of roof space. In fact, at 90 degree slope it still holds over 20 ounces of water.

Types of Uses:

> [Post Frame /](#)

[Agricultural Buildings – equipment storage, livestock confinement, and outbuildings.](#)

> [Open Walled Structures](#)

[like carports/truck and RV Storages](#)

> [Steel Buildings](#)

> [Self-Storage](#)

> [Workshops/Unattached garages](#)

> [Retrofit or reroofing of residential buildings – keeps condensation from dripping down in the cavity between new and old roof.](#)
